Using the Equate Pulse Oximeter

Using the Equate Pulse Oximeter is a straightforward process. Follow these steps for accurate readings:

Step-by-Step Instructions

1. Prepare the Device: Make sure the pulse oximeter is clean and in working condition. Check the battery level if applicable.
2. Positioning:
 - Remove any nail polish or artificial nails from the finger you plan to use, as these can interfere with the readings.
 - Ensure your hands are warm and relaxed. Cold fingers may lead to inaccurate measurements.
3. Insert the Finger: Open the device and gently place your fingertip (usually the index or middle finger) into the oximeter. Ensure that the finger is inserted all the way to the bottom of the clip.
4. Press the Button: Once the finger is in place, press the button to turn on the device. The screen will display the readings shortly after.
5. Read the Results: Observe the display for the following:
 - SpO2 Level: This percentage indicates the amount of oxygen in your blood (normal levels range from 95% to 100%).
 - Pulse Rate: The number of heartbeats per minute, usually displayed alongside the SpO2 level.
6. Remove the Device: After taking the readings, gently remove your finger from the device and turn it off if it does not automatically shut down.

Interpreting the Results

Understanding the readings produced by the Equate Pulse Oximeter is crucial for proper health management.

Normal Ranges

- SpO2 Levels:
 - 95% to 100%: Normal
 - 90% to 94%: Mild hypoxemia (may require monitoring)
 - Below 90%: Severe hypoxemia (seek medical attention)
- Pulse Rate:
 - Adult resting heart rate typically ranges from 60 to 100 beats per minute. Rates outside of this range may indicate underlying health issues.

Maintenance of the Equate Pulse Oximeter

Proper maintenance of your pulse oximeter is essential to ensure its longevity and accuracy.

Cleaning the Device
