This comprehensive guide will cover common problems, solutions, and maintenance tips to ensure your plow operates smoothly throughout the snowy season.

Common Issues with Fisher Minute Mount Plows

When using a Fisher Minute Mount plow, operators may encounter various issues that can hinder performance. Below are some of the most common problems and their potential causes:

1. Plow Won't Raise or Lower

If your plow is not responding to the controls, it could be due to several reasons:

- **Electrical Issues:** Check the connections, fuses, and electrical harness for any damage or corrosion.
- **Hydraulic Fluid Level:** Low hydraulic fluid can prevent the plow from operating properly. Ensure the fluid is at the correct level.
- **Control Module Failure:** The control module may be malfunctioning. Inspect or replace if necessary.

2. Plow Angle Not Adjusting

If the plow angle cannot be adjusted, consider the following:

- **Hydraulic Blockage:** Inspect for any blockages in the hydraulic lines that may restrict fluid flow.
- **Faulty Solenoid:** A malfunctioning solenoid may prevent angle adjustments. Test and replace as needed.
- **Worn Hydraulic Cylinders:** Look for leaks or wear in the hydraulic cylinders that could affect performance.

3. Plow is Not Catching Snow Effectively

If the plow is not catching snow as it should, troubleshoot the following:

- Blade Height: Ensure the blade is set to the correct height for optimal performance.
- Edge Condition: Check the cutting edge for wear or damage. A worn edge should be replaced.
- Plow Positioning: Make sure the plow is angled correctly for the conditions.
