Chapter 2 of the Glencoe precalculus workbook introduces the concept of functions, their characteristics, and how to manipulate them. Each section of the chapter builds upon the previous one, allowing for a comprehensive understanding of functions.

Functions and Their Notation

The chapter begins with the definition of a function, explaining how it associates each element of a set with exactly one element of another set. Key points include:

- Definition of a function
- Function notation ($f(x)$)
- Domain and range

Understanding these foundational elements is crucial for students as they progress through the chapter.

Types of Functions

Following the introduction to functions, the chapter categorizes different types of functions, including:

- Linear Functions
- Quadratic Functions
- Cubic Functions
