Maintenance of Your Heritage Safe

Regular maintenance is essential to ensure that your Heritage safe remains in optimal condition. Here are some tips for maintaining your safe.

Regular Checks

- Inspect the Locking Mechanism: Periodically check that the locking mechanism is functioning correctly. If it becomes sticky or difficult to operate, consider applying a lubricant suitable for safes.
- Clean the Exterior: Use a soft cloth to wipe down the exterior, removing dust and dirt. Avoid using harsh chemicals that could damage the finish.
- Check for Moisture: Inspect the interior for any signs of moisture or rust. If found, consider using desiccants or moisture absorbers to mitigate the issue.

Fire and Water Protection

- Testing Fireproofing: While Heritage safes are designed to withstand certain temperatures, avoid placing items that can be easily damaged by heat directly against the walls of the safe.
- Inspecting Seals: Ensure that the seals around the door are intact to maintain water and fire resistance. Replace any worn seals promptly.

Troubleshooting Common Issues

Even with proper maintenance, you may encounter issues with your Heritage safe. Here are some common problems and their solutions.

Lock Does Not Open

- Check the Code: Ensure that you are entering the correct code. For combination locks, ensure that you are following the correct sequence.

- **Battery Replacement:** For electronic locks, a dead battery may prevent opening. Replace the battery and try again.
- **Mechanical Issues:** If the lock is jammed, consult the manual for troubleshooting tips or contact customer support.

Door Won't Close Properly

- **Inspect Hinges:** Check for any obstructions or damage to the hinges.
- **Alignment:** Ensure that the safe is level and properly anchored to the floor.
