Origins of Japanese Whiskey

The history of Japanese whiskey began in the early 20th century, influenced heavily by the brewing traditions of Scotland. The first known attempt to produce whiskey in Japan can be traced back to the late 1800s when Masataka Taketsuru, a young man from a sake brewing family, traveled to Scotland to study the art of whiskey making. His formal training at the University of Glasgow and his time spent at various distilleries equipped him with the necessary skills and knowledge to create a unique Japanese interpretation of whiskey.

In 1920, Taketsuru returned to Japan and established the Yamazaki Distillery, which became the first commercial whiskey distillery in the country. The distillery was founded by Shinjiro Torii, the founder of Suntory, who recognized the potential of whiskey in the Japanese market. The production methods employed at Yamazaki were heavily inspired by Scottish techniques, but with a distinct Japanese touch that would define the country's whiskey industry.
