What is Occupational Therapy?

Occupational therapy is a client-centered health profession that focuses on helping individuals achieve independence in their daily activities. The Core Philosophy of Occupational Therapy

At its core, occupational therapy is rooted in the belief that engaging in meaningful activities, or "occupations," is crucial for health and well-being. The philosophy of OT emphasizes the following key components:

- **Client-Centered Care:** Therapists collaborate with clients to identify goals and tailor interventions to meet individual needs.
- **Holistic Approach:** OT considers the whole person, including physical, emotional, social, and environmental factors.
- **Engagement in Meaningful Activities:** Therapy focuses on activities that are important to the client's life.
- **Evidence-Based Practice:** OT relies on research and clinical evidence to inform practice and improve client outcomes.
