3. **Behaviorism:** Pioneered by John B. Watson and B.F. Skinner, behaviorism shifted the focus from the mind to observable behavior, arguing that all behavior is learned through interaction with the environment.
4. **Psychoanalysis:** Sigmund Freud's psychoanalytic theory introduced the concept of the unconscious mind and emphasized the role of childhood experiences in shaping behavior and personality.
5. **Humanistic Psychology:** This approach, associated with Carl Rogers and Abraham Maslow, emphasized personal growth, self-actualization, and the inherent goodness of people.

The Different Branches of Psychology
